

Network Solutions

- With our extensive experience in planning, developing and installing network solutions, we can provide you with a tailored IT network to meet your needs.
We also have specialist technicians in Wired and Wireless infrastructures, who will work with your office designers and builders to ensure your communication infrastructure is laid down correctly.

IT Support & PC Care

- We offer proactive monitoring of your organisation's network, dealing with any issues which may occur, often without you ever knowing there was a problem. Our clients can call us, no matter how big or small the issue. We believe that the majority of issues can be resolved remotely, however a technician is always available.
We offer PC Health checks to ensure PCs are running at an optimum. A variety of support packages are available, which are tailored to our clients' needs.

Internet & Email Services

- Email and the Internet are two key communication tools in today's world. We deal with a variety of Internet Service Providers (ISPs) to ensure we deliver the best possible solution at all times. We research and then recommend the most reliable, secure and cost effective solution for your business.
We implement and manage your Internet and Email requirements to ensure high levels of security and control.

IT Consultancy and Project Management

- We offer a full IT consultancy service where we can help you define your IT strategy to ensure you purchase the right software or upgrades, which allow for growth. We are committed to managing projects through from initial planning, procurement, installation to on-going support.

Business Continuity Plans

- Many businesses rely heavily on their PC's and Networks to be available all the time. We can provide consultancy and technical solutions for the protection of your data.
Effective data backup is essential to ensure your business can continue. We provide consultancy and technical solutions for the protection and recovery of your data
